Ex. No.:1 Installation of Data Analysis and Visualization Tools

A. Installing Python (Anaconda Distribution)

1. Visit https://www.anaconda.com/download and download the Anaconda installer for your operating system (Windows/macOS/Linux).
2. Run the installer, accept the license agreement, and choose 'Install for me only'.
3. During installation, allow the option to add Anaconda to the system PATH (or use Anaconda Prompt if not added).
4. Once installed, open Anaconda Navigator or Anaconda Prompt.
5. Launch Jupyter Notebook or JupyterLab from the Navigator, or run 'jupyter notebook' from the terminal.
6. Verify the installation by checking the Python and Pandas versions.

B. Installing R and RStudio

1. Download and install R from https://cran.r-project.org for the appropriate operating system.
2. Download and install RStudio Desktop (free version) from https://posit.co/download/rstudio-
    i. desktop/.
3. Open RStudio and install the commonly required packages from the console.
4. Verify the installation by printing the R version and loading a package.

C. Installing Tableau Public

1. Visit https://public.tableau.com/en-us/s/download.
2. Enter an email address and download the installer for your OS.
3. Run the installer and follow the on-screen setup wizard.
4. Open Tableau Public and connect to a sample .csv/.xlsx file to confirm the installation works.

D. Installing Microsoft Power BI Desktop:

1. Visit https://powerbi.microsoft.com/desktop/ or install 'Power BI Desktop' from the Microsoft Store.
2. Run the installer and complete the setup.
3. Sign in with a Microsoft account (optional for local use).

4. Open Power BI Desktop and use 'Get Data' to import a sample dataset to confirm the installation.
